

Hotel “Las Nubes de Holbox”, one of the six places in the world to interact with the whale shark.

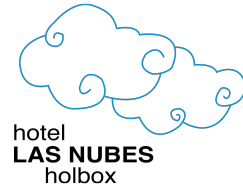

For those who like to live really exciting experiences, Las Nubes de Holbox offers its visitors the option to swim with the impressive whale shark, the largest fish in the world that can reach a length of 18 meters (59 feet). During one season, there were up to 1,400 specimens, which was probably the greatest concentration so far.

The locals call them “Dominos” because of the White spots they have on their back. The whale shark only eats plankton, a docile and gentle fish, so the swimmers have nothing to worry about.

The whale shark has arrived at the Northern tip of the Yucatan Peninsula (to the island of Holbox) for many years to feed themselves and to mate from May through October. Thanks to its docile behavior, it is possible to get near them and even touch them, which definitely becomes a spiritual, unique and unforgettable experience.

From June to September, **Las Nubes de Holbox** organizes tours with qualified staff which will guide the visitors to the place where they will be able to swim and even hug a whale shark. You may be able to see beautiful manta rays, dolphins and sea turtles along the way

Las Nubes de Holbox
